

DRaaS

Disaster Recovery as a Service

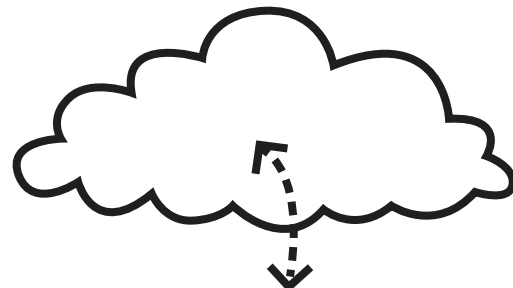

RapidScale offers businesses wanting to keep their production servers, storage and applications in-house the added protection and piece of mind of offsite backup and disaster recovery in our secure infrastructure.

Complete data protection, backup and failover for your business

- * Real Time Replication
- * Application Failover

Our disaster recovery service enables business to:

- » Enhance their availability and uptime with rapid backup to one of our secure offsite facilities
- » Shorten recovery time objective (RTO) for business critical applications and data
- » Lower total cost of ownership (TCO), saving staff time by automating backups
- » Access fully managed recovery services to reduce the risk and support compliance

When we were looking to protect our valuable business information, we found a variety of services that would take our data. However, RapidScale rose to the top by not only backing up our data, but allowing a seamless failover to our applications in the event of a disaster or system failure. This piece of mind coupled with RapidScale's excellent support and knowledge are why we are glad to have them managing and supporting our DR plans.

—Clarence Jordan, Controller,
Georgian Terrace Hotel

We also offer continuous data protection (CDP), which essentially captures every version of your data that the user saves. This allows the user or administrator to restore data to any point in time.

Industry analysts claim that two out of five businesses that experience a disaster will go out of business within five years of the event.
